

# GroWell Holiday Watering Kit - Instructions

page 1/1

## Overview

Thank you for purchasing your GroWell Holiday Watering Kit - the basis of a simple yet effective selfwatering system for hand-fed, pot-grown plants. When combined with a timer and nutrient reservoir this package of products will reliably 'hold the fort', allowing you to get away and enjoy the sunshine every now and again. You could even use the system to completely eradicate the task of manual waterings!

## Kit Contents

1x	Nova Pump (250 - 800 Litres per hour, 13mm outlet)
12x	Assembled 2 Litre/Hour Dripper
1x	Hole Punch
1x	Pipe LDPE 13mm - 3 metres
1x	Elbow 13mm
1x	End Stop 13mm

## System Set-Up

1. Secure the Nova Pump to the base of your nutrient reservoir.
2. Create an L-shaped tube for transporting nutrient solution using the 13mm LDPE pipe and 13mm Elbow (refer to diagram below). Soften the ends of the pipe with hot water when connecting it to the pump outlet and 13mm Elbow. Position the tube so that the drippers will be able to reach your plants.
3. Use the hole punch to make entry points for each dripper on the pipe. Insert the nipple end of a dripper into one of these holes on the pipe and place the drip stake into a pot containing a plant and your chosen medium. Make sure that the entire drip stake is buried. Repeat this process for all the drippers you intend to use, ensuring that there is one per plant.
4. Cut the end of the pipe several centimetres from your last dripper then soften it with hot water and attach the 13mm End Stop.
5. Plug the pump into your timer and adjust the settings so that feeds are triggered when required. Fill your nutrient reservoir with nutrient solution, then turn the mains on.

## Feed Schedule

The frequency and duration of feeds you set your watering system to carry out will obviously depend on plant sizes, pot sizes and the medium used. As a good starting point we recommend initiating 15 minute irrigation cycles 2-8 times a day. Your plants will need to be watered as soon as the pots and medium show signs of becoming dry (never let them dry out completely). It really is that easy!
