

Hotbox Sulfume - Instructions

page 1/2

NEVER move the Hotbox while it is operating because the heater and/or sulphur might burn you

Overview

Thank you for purchasing the Hotbox Sulfume. We believe that you can now look forward to enjoying the benefits of a very effective grow room pest controller.

Product Information

Sulphur has been used in commercial horticulture for controlling various insect problems for a long time but the Hotbox Sulfume is the first safe and effective unit for the hobby grower that we have found. Unlike many other units, this one vapourises the sulphur rather than burning it which means that no nasty chemicals are released into your grow room and it is safe to use whilst your plants are present. Effective at treating existing infestations and preventing future problems, the Sulfume is a trustworthy Spider Mite control measure.

One Hotbox can effectively treat a grow room 2-50 metres squared in dimension. Multiple Hotboxes will be necessary for bigger areas.

A 2kg bag of sulphur should last approximately 1 year and contains more than enough to address several pest infestations based on our recommendations (see page 2).

After 2 weeks of use the Hotbox should have eliminated pests such as Spider Mites. You are advised not to use the Hotbox during the last 2 weeks of harvest/fruiting otherwise your plants may be damaged.

The Hotbox releases an "egg-like" smell that's not harmful but can be irritating. Ensure your grow room is properly sealed so that the smell cannot travel elsewhere.

Following excessive use a crystal-like discharge will normally form above the Hotbox. Simply use a vacuum cleaner or dustpan and brush to clean this.

Kit Contents

- 1x Hotbox Heater
- 1x Cup
(Granulated Sulphur sold separately)

Recommended Extras

5665	2kg Granulated Sulphur	£24.00
0868	8kg Hanging Chain (per metre)	£00.85
0869	'S' Hook (each)	£00.30
1253	10kg Ceiling Hook Plate (each)	£00.95

Additions/Alternatives

1146	Spidermite Control 100mls	£12.00
0413	Red Spider Mite Predators x 1000	£20.00
0488	Red Spider Mite Predators x 2000	£35.00
2153	Pest Off Concentrate 250mls	£19.95

Installation Instructions

1

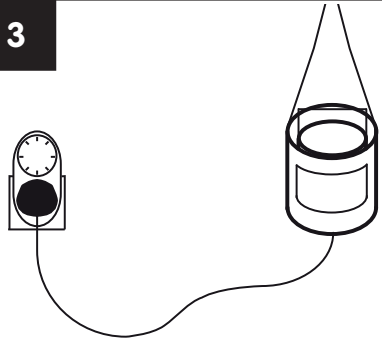

Select a suitable location for your Hotbox. Initially set it up as high as possible in the grow room because the Sulphur vapour drops onto your plants as well as the surrounding areas.

2

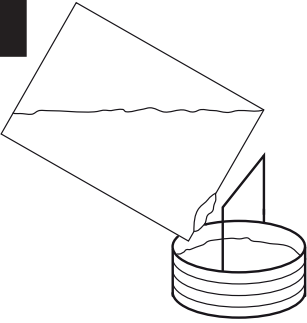

Hang the Hotbox heater from your ceiling using a chain.

3

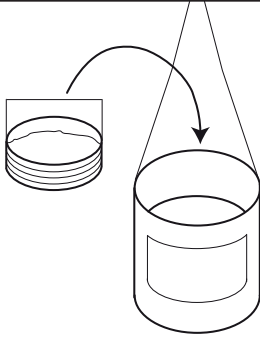

Plug the device into a timer (refer to the table on page 2 as a guide for timings)

4

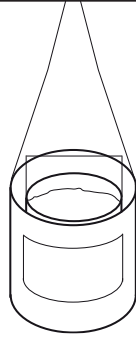

Fill up the cup to the level indicated by the line inside it - this will then enable the Hotbox to function effectively for approximately 150 hours of use (NEVER run the Hotbox when the cup is empty).

5

Place the cup on the Hotbox heating plate.

6

You are ready to begin using your Hotbox. Lights, extraction fans and input fans should be turned off before and during use of the Hotbox.

Recommendations for Use

For Most Pest Infestations

Night	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Running Time (Hours)	6-8	-	6-8	-	2	-	2	-	2	-	2	-	2	-

For Serious Pest Infestations

Night	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Running Time (Hours)	6-8	-	6-8	-	6-8	-	2	-	2	-	2	-	2	-
